

Setting the AeroGarden Light/Water Cycle

The AeroGarden has a timer that automatically controls the length of time the lights and the water pump are on and off. There are 5 different plant settings on the *Control Panel* from which to choose. This allows

you to find the ideal combination of light and moisture for the plants you grow. Use the chart below to determine which plant setting is best for your garden.

Control Panel Light and Pump Cycles

Control Panel Setting	24-Hour Light Cycle		24-Hour Pump Cycle		Hours Lights are Off with Pump Running
	Hours Lights Are ON	Hours Lights Are OFF	Hours Pump Is ON	Hours Pump is OFF	
Tomatoes/Peppers	16	8	20	4	4
Salad Greens	16.5	7.5	24	0	7.5
Herbs/Basil	17	7	17	7	0
Flowers	15.5	8.5	20	4	4.5
Strawberry	15	9	15	9	0

Note: On all settings, the pump always runs when the lights are on.

HELPFUL HINT: “Herbs/Basil” & “Strawberry” are the only setting for which the pump is always off when the lights are off. All other settings have a “wet” interval, when the lights are off but the pump is still running.
